

AMENDMENTS TO THE SPECIFICATION

Please change paragraph 0029, as follows:

[0029] The spring 15 is placed between an immovable spring engagement projection 18 formed on the side surface of the carriage 1 and a movable spring engagement piece 19 formed at the middle of the hook 12 and moving together with the rotation of the hook 12. When the hook 12 engages the pin 10, the axis 13 of the hook 12 is located above the spring 15, and when the hook 12 is away from the pin 10, the axis 13 of the hook 12 is located above below the spring 15. As a result, the spring 15 switches the direction of urging the hook 12 between the locked state and the released state. In the locked state, the spring 15 urges the hook 12 clockwise so that the hook 12 engages the pin 10, and in the released state, the spring 15 urges the hook 12 counterclockwise so that the hook 12 moves away from the pin 10.
